COLORCLOTH™ PRO

Food Hygiene Starts Here

COLORCLOTH™ PRO KITCHEN CLOTH

Greenwipes® ColorCloth™ PRO is a heavy-duty cleaning cloth alternative for towels used in the professional food handling industries. It is thick, durable and more absorbent than conventional towel or cloth used for cleaning any food related surfaces and equipment. But unlike fabrics, the ColorCloth™ PRO is so easy to wash and quick drying that germs are unable to breed on this cleaning cloth. This means a hygienic and odor-free wiping material that does not cross-contaminate between wiped surfaces.

Available in various colours for easy colour coding according to cleaning tasks or areas to facilitate compliance to your HACCP system in your food handling facility.

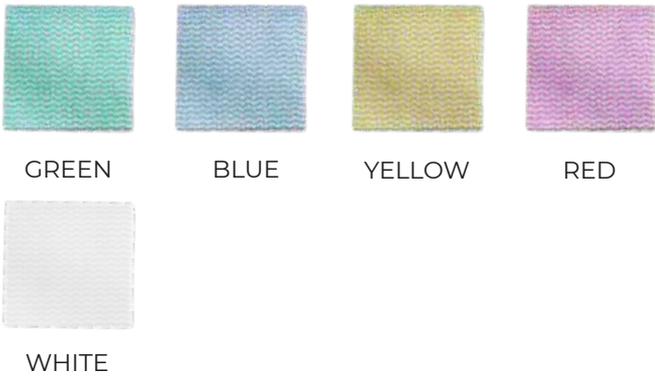

Designed For:

Food related cleaning such as fine crumbs, oils, flour and liquid spills

Ideal For:

Food handling facilities and businesses such as food processing plants, food manufacturers, food and beverage outlets, restaurants and hotels.

Available Color:

This alternative for food service towels is a safer and more hygienic option compared to the commonly used Good Morning towel, checkered towel or microfiber towel especially in industrial kitchens and food processing facilities. ColorCloth™ PRO is FDA approved safe for food contact surfaces so you do not have to worry about shedding of microplastics onto your prepared foods.

Product Code: GW-9000
25 Sheets Per Pack
10 Packs Per Carton
Sheet Size: 30 x 60 cm
